Weighted Average Life Maturity	33.99							

Treasury repurchase agreements are collateralized by various U.S. Treasury Obligations.

Fund holdings are as of the date specified and there is no assurance that the actual securities listed have or will remain in the portfolio.

The 'weighted average maturity', or WAM, and 'weighted average life' or WAL, of a fund are measures of the length of time to maturity of all the underlying money market instruments in the fund weighted to reflect the relative holdings in each instrument. In practice this measure is an indication of current investment strategy and is not an indication of liquidity. For WAM, the length of time to maturity for a floating rate note is determined using the instrument's floating rate reset date. For WAL, the length of time to maturity for a floating rate note is determined using the instrument's maturity date or date of unconditional put.

An investment in the Fund is neither insured or guaranteed by the Federal Deposit Insurance Corporation, U.S. government or any other government agency. Thus, while the Fund seeks to maintain a stable net asset of \$1.00 per share, there is no assurance that it will do so. It is possible to lose money by investing in the Fund.

Investors should carefully consider the investment objectives, risks, charges and expenses of a fund before investing. The Fund's prospectus contains this and other information about the Fund. Please read the prospectus carefully before you invest or send money.
